Software Development AI Applications Game Development Internships

zhemingsong0312@163.com | songzheming0312@gmail.com

github.com/szm20060312 | szm20060312.github.io

Computer Science undergraduate with an AI application internship and personally led projects in desktop software, Web games and LLM applications.

Education

Macau University of Science and Technology

2024 - 2028 expected

Bachelor of Science in Computer Science | Third year | Primarily taught in English

Coursework: Data Structures, Algorithms, Linear Algebra, Probability and Statistics. Current studies: Software Engineering, Operating Systems, Networks and Computer Graphics.

Technical Skills and Practice

Web and games TypeScript, JavaScript, React, Vite, Node.js, Express; game state modelling and browser interaction.

Desktop Tauri 2 and Rust; native macOS project practice with Swift, SwiftUI and AppKit.

AI applications Dify workflows, retrieval-augmented generation (RAG), prompt design, model APIs and structured output.

Engineering Git/GitHub, builds, testing and technical documentation; C/C++ coursework and projects.

Internship Experience

Beijing RocKontrol Intelligent Connected Technology Co. Ltd

Algorithm Engineer Intern | Software Product Department

Jul 2026

- Contributed to an AI agent for carbon peaking and neutrality, trading and emissions; designed Dify conversational workflows and knowledge retrieval.
- Iterated prompts and follow-up routing; supported model adaptation, testing and regression cases.
- Evaluated Markdown-to-Word tools and developed HTML report workflows, including output formatting, chart presentation and documentation.

Selected Projects

Personally led projects

March 7th Desktop Companion Tauri 2 TypeScript Rust

[Source](#)

- Led a macOS and Windows animated desktop companion, combining frontend interaction with Rust system APIs and a transparent, frameless, draggable window.
- Coordinated idle animation, 16 cursor-driven gaze directions and drag animations; documented cross-platform builds, tests and validation.

Jin Xin Strategy Game React TypeScript Vite

[Source](#)

- Led a merchant-banking strategy game covering quarterly decisions, economic simulation, events and annual settlement.
- Managed game state with useReducer and Context, separated rule calculations from the UI, and implemented resource changes, branch operations and save interactions.

AI Emoji Idiom Game JavaScript Node.js Express LLM APIs

[Source](#)

- Led an AI-assisted browser game with DeepSeek, OpenAI and Anthropic API integrations; constrained puzzle content and JSON output through prompts.
- Reduced repeated puzzles through answer exclusions and retries; built hints, a countdown, combo scoring and a local leaderboard.
